**МОСКОВСКИЙ ГОСУДАРСТВЕННЫЙ УНИВЕРСИТЕТ
имени М.В. ЛОМОНОСОВА**

ОЛИМПИАДНАЯ РАБОТА

Наименование олимпиады школьников: **«Ломоносов»**

Профиль олимпиады: **Английский язык**

ФИО участника олимпиады: **Дубровская Мария Алексеевна**

Класс: **11**

Технический балл: **89**

Дата проведения: **05 марта 2022 года**

A

1. False. According to the text, Edward I was an English king, which means ~~he~~ he inherited the right to rule the country.
2. False. The text claims that Edward I showed outstanding military capacity. Also, Aleksandr Nevsky was known for his military success. He won battles against the Finnic peoples and the Lithuanians. ~~He~~ Moreover, he defeated the Germans and the Swedes.
3. Not stated. While it is clearly stated that Edward I ~~had~~ had a wife, ~~it~~ it is not mentioned whether Aleksandr ~~Nevsky~~ Nevsky was married or not. The fact that he had a son does not necessarily mean that he had a wife.
4. True. Edward I used to be ~~very~~ ruthless and lawless but ~~he~~ eventually ~~he~~ learned to appreciate justice.
5. Not stated. ~~Although~~ It is not mentioned whether they considered serving their countries to be enjoyable or not.
6. False. Both Edward I and Aleksandr Nevsky were great negotiators (the word "collaborator" is used to describe Aleksandr).
7. True. Aleksandr Nevsky is said to have changed the basis of rule. He established institutional sovereignty.
8. True. Aleksandr promulgated laws. Edward I introduced legal reforms.

B

George III was very pleased to have the magnificent lands of America under his ~~rule~~ rule. It was a land of untold riches, and many ~~the~~ monarchs had their eye on it.

However, people in America dreamed of freedom. They wanted ~~represent~~ representation in the Parliament. George III

УКТОБНИК 2 |

threatened them and introduced harsh laws, but that didn't save the day. American people strongly believed there were certain rights everybody inherited when they were born. They were in anticipation of the creation of a new country. The war against the ~~British~~ British rule began.

George III was crossed and considered it a betrayal. He simply couldn't imagine letting those people lead their lives blissfully.

To his ~~great~~ ^{own} disappointment, George III lost the war. America wasn't his royal subject anymore.

C

I - the interviewer
W - the writer (Lewis Carroll)

50

I: Good afternoon, Mr Carroll! I am extremely pleased to see you.

W: It's a pleasure to be here today!

I: Could you please tell me a little bit about yourself?

W: Sure! My real name is Charles Lutwidge Dodgson, I was born in 1832 in England. My ~~main~~ major passion in life is writing. ~~I don't associate myself with any particular literary movement, but ~~my~~ some wo~~
I like kids and I hope to encourage them to learn about our wonderful world.

I: As far as I know, you are considered a prominent figure in the field of so called nonsense literature. You are also a mathematician, aren't you?

W: That's right.

I: Well, it seems that you are a really well-rounded person, Mr Carroll! Today I wanted to discuss science with you. But first of all, I'd like to clarify something. Did you include any facts from mathematics in your books aimed at children?

W: I don't want to intimidate young minds with complicated theories. Teaching them mathematics through my books isn't my goal. But I featured

УКТОБУК 3

the game called chess in my book "Alice's ^{Adventures} in Wonderland".
~~I believe this game requires the thinking of a~~ I believe
one should think like a mathematician in order to
understand this game.

~~I see. Nowadays~~ However, nowadays there are

I: I see. Nowadays, there are special machines that
are called computers. Their thinking is different from
ours, but they can play chess too! Their decisions
are calculated automatically.

W: That's truly fascinating. ~~We don't~~ It's a pity we don't
have these machines in my time! Now it seems that
"Alice's ^{adventures} in Wonderland" is too old-fashioned for modern
kids.

I: ~~That~~ I'd say it's still a very captivating ^{and thought-provoking} read! The
part where Alice falls in the ^{rabbit} hole reminds me of the
black holes.

~~W: While writing that scene, I was ~~thinking~~ wondering
if there are places where things can disappear
completely.~~

W: What are ^{the} black holes?

I: ~~The~~ The black hole is a place in ~~the space~~ space
where things can disappear completely. Nobody
knows what happens to objects that encounter
black holes.

W: That is very interesting. The scientists of my time
haven't heard of that concept yet.

I: What do you think is the most captivating part
of your book ~~in~~ in terms of science?

W: I think it is the ending where Alice realises she
was just dreaming. Dreams are a mystery.

I: What do scientists of your time say about ~~dreaming~~
sleeping and dreaming?

W: It is believed that while one's body is relaxing,

УСТОВУК 4 |

his or her mind is wandering. It may go to unknown worlds ~~where~~ where regular laws of science do not apply. For example, Alice can make herself bigger or smaller simply by ~~biting~~ biting off the mushroom!

I: Well, not many people have that opinion about the nature of dreaming nowadays. In fact, scientists say that weird places and phantasmogoric creatures are generated by our brain. It has been proved that people's dreams are comprised of the memories, thoughts and emotions they experience ~~every day~~ when they are awake. What do you think about ~~that~~ that?

W: ~~That is an interesting explanation.~~

I: ~~Moreover, there is a medical condition called ~~that~~ syndrome!~~

I: What are your thoughts on the future of science?

W: I hope someday there will be a scientific explanation behind ~~the~~ the mysteries that I reflected in my books! Maybe people will discover what exactly happens in those black holes you have mentioned.

I: Yes, ~~finding out about the origins of those objects~~ would definitely become a ~~scientific~~ milestone of science.

W:

I: Yes, finding out about the origins of those objects would be amazing. I also ~~hope~~ hope to see a rapid development of the ~~computer~~ computer science,

W: I also wonder

one day

W: That sounds interesting. Maybe ^{one day} those machines will be similar to humans in every aspect! Now I think it's time for me to leave. Thank you for having me.

I: It was a pleasure to meet you. Goodbye!

W: Goodbye!
