ФИО участника олимпиады: **Мялицына Милана Михайловна**

Класс: **11**

Технический балл: **90**

Дата проведения: **05 марта 2022 года**

BOOK 1

A

1. False. While Nevsky was elected prince in 1236, Edward I inherited the throne from his father, King Henry III, and was crowned being 35 years of age.
2. False. Aleksandr Nevsky defeated Swedes back in 1240 as well as won some battles against the Germans in 1242. Edward I, in turn, managed to subdue Wales.
3. True. King Edward I was married to Queen Eleanor and Aleksandr Nevsky tied the knot with the Polotsk Prince's daughter in 1239.
4. True. By the time of his coronation, Edward I ~~was~~ had gained himself a reputation of a violent and arrogant man, so during his reign he had to learn ~~to~~ to master his character.
5. Not stated.
6. True. Having got hold of his anger, Edward I managed to establish himself as a great negotiator, full of patience and generosity.
7. True. Aleksandr Nevsky ~~was the first prince~~ ^{changed} personal sovereignty to ~~institutional sovereignty~~ ^{at the time} institutional sovereignty, which was the constitutional basis in Novgorod.
8. True. Edward I's ~~was~~ reign is well known for his legal reform, while Alexander Nevsky is remembered for his changes in the ~~was~~ constitutional ruling-basis.

B

QUEEN AND LANCELOT

Once upon a time there lived a queen named Eliza. Though her magnificent kingdom possessed untold riches, the queen was miserable as she'd inherited the crown after her father's recent death.

Eliza's youth made her subjects doubt her reign and she often was threatened. Fearing a betrayal, she decided to have a knight who'd save her were she in danger. She had her eyes on Sir Lancelot and when he took his place by her side she could finally sleep blissfully again.

Lancelot was very handsome and everyone waited with anticipation for the romantic development of feelings between him and Eliza. Sure enough the two fell in love and the knight surprisingly married into the royal family.

Interviewer: As we all know, science is ~~something~~ an inseparable part of our lives. If you are not particularly a fan of physics and biology, you may think science is something very distant and complicated which has nothing to do with an average person. But in that case, you, my dear readers, are nowhere near the truth. First of all, science is not limited to just these two fields. Secondly, it, in fact, surrounds us everywhere and literary every day. Our lives are closely connected with a variety of products of scientific minds. However, things that are pretty normal today, were seen as something almost magical back in times, when they were just invented. To talk about the current trends in science we have invited one of the most brilliant writers of the ^{mid-}19th century, Louisa May Alcott. ~~She represents~~ ~~is~~ ~~a~~ ~~perfect~~ ~~example~~ of her books are a perfect example of realism in literature, and though there ~~were~~ were not many of them, it's the quality of something that counts and not the quantity, right? Welcome, Ms. Alcott!

L. M. Alcott: Thank you! It is a pleasure to be here today!

Interviewer: So, Louisa, if I may call you so, let's start with ^{some} basics. What is science for you personally?

L. M. Alcott: Well, you know, in my opinion, it is a very wide notion that comprises a lot of things. Mentioning science, one's ~~own~~ first thought may be ^{for instance,} of laboratory frogs ^{being} cut in halves, whose organs are ^{then} examined. As for me, I like to think of it mostly from the point of view of the ways its results can be applied in our ~~of~~ daily lives. So, for example, I don't care much ~~for~~ for some disease if ~~I don't know~~ it doesn't affect me in any way.

Interviewer: Oh, yes, I see. In this case, why don't we ~~take~~ take a closer look at medicine first, as you have mentioned it? Being in the 21st century, you have probably noticed that today the main concern of all doctors and other people

involved in this field is Covid-19. ~~pandemic~~ ~~and the~~ All around the world people are desperately trying to battle the pandemic, ~~however~~ some have been successful, but, unfortunately, in many places the death rate is still high. What are your thoughts on this issue?

L.M. Alcott: Well, you know I am truly in awe at how much has been achieved in the field of medicine since the 19th century. Back in my day and age, you knew you were in ~~trouble~~ trouble if you ~~were~~ were ill with something stronger than a cold. Sadly, I had a personal experience of such kind with one of my dear sisters which I described in detail in my ~~own~~ book "Little Women". There, one of the sisters, Beth, died, ~~of~~ being seriously wickened by an illness that she had previously managed to get over. Of course, it was nothing like the pandemic. ~~of today~~. I am really happy that the advancements of today's medicine give people hope and actually save millions of them. Had it been at ~~the~~ such a level of development back in my time, maybe ~~my~~ my sister (and Beth) could have been alive.

Interviewer: ~~And speaking about the appliance of technology~~

Now, I'd like to talk about the technological side of science. I believe that such things as AI, robots, and computers are a big and significant part of all the discoveries and inventions made during the past decades. ~~Did~~ ^{Did} you imagine ^{seeing} anything ^{of} like this in ^{our} future?

L.M. Alcott: Oh, ~~no~~ no, of course not! Maybe, it's not very good of me, but I cannot but envy the writers of today. That's what is called being born in the wrong generation! ~~Now~~, it's so simple to I imagine now it is so simple to ^{create} ~~write~~ a book or anything else really with the kind of technology that a huge number of people ^{has} ~~has~~. Having a laptop, or a tablet, or even a phone gives you so much freedom in terms of writing. You can type anything so fast! Back in my days, I had to sit days on end and rewrite all my stories by hand. I think today it would be a torture for many young people. ~~And~~ Moreover, you have email and social media which make ^{connecting and} reaching out to people ~~is~~ almost instant.

50

Memorandum 4.

We had ~~to send~~ no alternative but to send letters, actual paper letters, to each other and then wait weeks or even months ~~to~~ for an answer. ~~By~~ So, the main character of ~~my~~ Little Women, for instance, ~~had to~~ ~~to~~ could not just send scans of her book through Telegram to the editor and then discuss ~~it~~ his remarks with him through Zoom. ~~It was~~ She waited awfully long for it would be truly a dream to have such appliances in the middle of the 19th century.

Interviewer: So, are you saying that all the technologies ~~are~~ today bring ^{us} nothing but good ~~things~~?

L. M. Alcott: Not exactly. I've heard about a number of physical and mental problems caused as a result of overusing them. However, I think that if used wisely, they can be greatly beneficial.

Interviewer: Thank you very much, Ms. Alcott for your being here today! It was a pleasure to have you here and talk to you!
