Part 2

- A.
- 1) F (Both of the leaders were the heirs of a reigning dynasty, therefore, they were not elected by people)
 - 2) F (It is an absolute lie, since Edward I successfully subdued Wales, whereas Aleksandr Nevsky fought off Germans and Swedes)
 - 3) T (Both leaders were married. Edward I had a wife, named Eleanor, and Aleksandr Nevsky married the heiress of Polotsk's prince)
 - 4) T (Yes, it is true for Edward I as he was notorious for his capriciousness, rage, intolerance, hubris, so he had to put much efforts into altering his character)
 - 5) F (It is false. Both men were dedicated rulers and wholeheartedly cared for the fates of their countries)
 - 6) NS
 - 7) T (Aleksandr Nevsky kept on ~~reigning over~~ Norgorod, using his son, Vasily, which ~~altered~~ undermined the ~~constitutional~~ basis in Norgorod.)
 - 8) NS

10

B.

Being an heiress of the royal family, Elizabeth II possessed magnificent skills of governing a country. When she heard that untold riches hidden by the ancestors of the royal dynasty had been discovered, she was determined to inherit it all. However, distant relatives of hers had their eyes on the newly found wealth. They tricked the Queen into divulging all the information and seemed they were close to becoming even more affluent. Anticipation killed them. It turned out they faced betrayal from their

accomplices, who threatened to tell everything to Elizabeth. Later, the riches were saved, and the Queen inherited all of it.

- Healthy lifestyle propaganda is trending on social media. Hundreds of thousands of people follow suits of proponents of sports and nutrition. The scale on which newscasters report a growing number of innovations in food technology is tremendous. And the trend is not going to fade any time soon. Here with us today is the prominent modern ~~author~~ author of a line of books dedicated to the fast-changing field of healthy food production, Alan Delvey. Welcome, Alan.
- Thank you, Rachel. It is an immense pleasure to be here with you today. I reckon it is ~~important~~ imperative to discuss the trend.
- Yes, Alan, I couldn't agree more. Let's start the ball rolling, then. So, Alan, what's your take on healthy eating habits? Is there harmful food or is there not?
- This question I get asked all the time. Being a qualified nutritionist, I cannot fully agree with the statement that there is a clear division between healthy and harmful foods. All the food we consume gives us energy. However, some of it does not saturate our bodies ~~as~~ like, for instance, products typically considered healthy. In the past, people were not so concerned about ~~the~~ calories and nutrients. Now, activists rave and rage about the importance of eating ~~as~~ healthy, as scientists have revealed new information about this lifestyle.
- And what is this?
- Well, I will allude to my recently-published book, which was well-received by ~~eminent~~. There are significant benefits to living such a lifestyle. According to Anna Ford, a leading scientist in my book, consumption of fibre, proteins, and slow carbs improves one's mood as well as the work of organs.

Zemobuk

- Interesting! What could you tell us about downsides?
- There are several drawbacks. Firstly, some manufacturers substitute so-called healthy ingredients with ~~cheaper ones~~ cheap ones, ~~I believe~~ which has a negative impact on health. I believe scientists will soon find a way to use cheap alternatives for ~~the~~ healthy food. Secondly, some ingredients have not been properly tested before being rolled out to market, which ~~takes a long time~~ poses a threat to consumers. In general, I think scientists will come up with new methods and ways of following healthy lifestyle ^{since} because it is a recent trend, there is much to be discovered.
- Thank you for your time, Alan.
- Thanks for having me, Anna.
